More than 130 years of experience in europe

WILLBRANDT Gummitechnik A/S

- Experts in **rubber and steel expansion joints** as well as **rubber and plastic products** for vibration, noise, and **shock absorption**.
- Our goal is to be the **go-to supplier** of technical rubber and plastic materials in all dimensions.
- Specialists in **expansion joints and damping solutions** using rubber and rubber/metal connections.

Expansion Joints – Essential for Pipe Systems

Absorbing Movement, Reducing Stress.

- **Making your equipment last longer, experience less downtime and have minimum maintenance**

Why Use Expansion Joints?

- Thermal and mechanical changes cause stress in piping systems.
- Without compensation, pipes may deform, crack, or fail.
- Rubber expansion joints absorb movement and vibration, ensuring system integrity.

Applications & Benefits

- Used in heating systems, water pipes, power plants, and chemical industries.
- Custom materials suited for various media: drinking water, oil, district heating, wastewater.
- WILLBRANDT is a leading European supplier with a global distributor network.

The perfect expansion joint

Which expansion joint is the right one?

It is important to choose the correct expansion joint for your next project.

When we have all the right parameters, we can help you find the perfect solution for your needs everytime

Things we need to know, to help you reach your goals:

- What is the medium?
- How is the environment where it should be installed?
- What is the installation dimensions?
- What is the building length?
- Operating pressure – before or after the pump?
- What type of expansion joint is needed?
- With or without flanges?
- How should it fit into your project?

... And then together, we can achieve your desired result.

Why WILLBRANDT?

Why choose WILLBRANDT as your main supplier?

At WILLBRANDT, the customer is always at the center and we strive to ensure that every project is completed with the best possible results.

Short Delivery Time

Stock Items & Express Service
for Urgent Breakdowns

Minimal Maintenance
